

Fire Risk Assessment and Fire Safety Training

If you can't identify the hazards you can't assess the risks

Providing Fire Risk Assessments and Fire Safety Training to help you comply with the Regulatory Reform (Fire Safety) Order 2005

Benefits

In addition to fulfilling the legal requirement to undertake a Fire Risk Assessment, additional benefits include:

Reduce the risk to persons, property and to businesses by

- identifying the hazards within the workplace and recommending control measures to reduce the risk and the likelihood of a fire starting

Businesses that suffer a large fire or total loss seldom recover. Those that do re-start can suffer business interruption for up to 9 months during which time skilled workers may seek other employment, leaving a skill shortage

Assist in delivering change in the general management of the fire safety provisions

- by engaging staff in the management of fire risks through fire awareness and fire warden training, your fire safety provisions will be continued to be monitored and maintained. This will assist with maintaining compliance with the existing legislation and reduce the risk of fire
- by identifying significant risks and the potential to replace those risks with procedures and equipment, the impact on neighbouring properties and businesses could be reduced or removed and therefore lessen any financial impact on the organisation

Remove the uncertainty of assessments carried out by in-house staff

- by using external assessors who are suitably qualified, experienced and members of an accredited professional body (Institution of Fire Engineers) it will remove the potential of uncertainty that risk assessments carried out by staff may not be suitable or sufficient

Some company risk assessments are carried out by staff that are neither qualified nor comfortable in undertaking such a responsible task

Let us help you comply with the new fire regulations

Visit our website www.gassafeconsultants.co.uk and complete a [Fire Risk Assessment Request Form](#)
We will then contact you with a quote based on your requirements

Fire Risk Assessment and Fire Safety Training

If you can't identify the hazards you can't assess the risks

Our two Risk Assessors and Fire Trainers have extensive experience at senior management level in both fire related training, legislation and fire safety risk assessments, along with incident command and fire investigation

On-site Fire Risk Assessment

There is a five-step approach when carrying out a fire risk assessment

Step 1 – Identify the hazards

Step 2 – Identify people at risk

Step 3 – Evaluate, remove, reduce, and protect from risk

Step 4 – Record, plan, inform, instruct, and train

Step 5 – Review

An in depth report detailing recommendations for the risk reduction and the management of fire safety provisions is produced with an action plan to assist in managing any improvements that are necessary and have been identified within the report

The report is broken down into 15 manageable sections with an action plan indicating realistic time scales for improvements

Following the undertaking of a risk assessment by our assessors' ongoing advice will be available to assist in the implementation of the recommendations identified in the significant findings. Reviews can also be undertaken where there have been changes to the property or work environment, which require the risks to be reassessed

Fire Safety Training

Companies are also required to ensure all persons employed to work in these premises receive instruction and training appropriate to their level of responsibility

On site training can be tailored to be site specific and incorporate existing Company Emergency Plans

The training will be risk based and can be held at any place of work or in a central training facility

Hands on fire extinguisher training on live fires is available as part of a training package

Training courses include:

- Introduction to Fire Safety
- Fire Warden / Fire Marshall
- Management in Fire Safety
- The selection and practical use of fire-fighting equipment
